Papers requirements include but not limited by:

CEUR-ART style files for papers

Please, note that the articles must be submitted in MS Word format in the publishing template

Title capitalization

Only the first letter of the title is capital: Title of your paper

Author names

Do not use author names with abbreviated given names such as "S. Writer". Always provide full author names like "Sarah Writer". Check the author name spelling with services like DBLP, if applicable.

Author affiliations

The authors in the paper should give meaningful affiliations, which typically include the author's organization and country. The information shall allow readers to establish a contact.

Footnotes

The authors should fill in the footnote on the first page (yellow colour in the template):

- Authors' emails.
- Authors' ORCIDs.

Minimum size:

- A *regular paper* has at least 10 "standard" pages (1 standard page = 2500 characters) and an appropriate number of references. It shall contain enough substance that it can be cited in other publications.
- A *short paper* is still a paper with references but has between 5-9 "standard" pages.

Since page counts depend on the page layout, we calculate with around 2500 characters per page (=380-400 words per page).

Authors and co-authors

There should be not more than 4-5 authors in one paper as a rule. One author cannot submit more than 2 papers in one conference.

Language: The papers should be in English.

An abstract of 150-250 words.

Keywords between 3-5.

Focus on computer science and wide audience: The CEUR-WS.org publishing service is a venue to publish proceedings of the workshop and conferences, where the main topic is related to computer science (incl. information systems and IT).
